

**CT Series**  
FLOOR COATING SYSTEMS

## Brilliant CT-1D

- ① Prepared Concrete
- ② Densifier

### System Description:

The Brilliant CT-1D is a system consisting of a single layer of densifier. This is a transparent system that preserves and strengthens the concrete.

### System Advantages:

- Creates a permanent, dense surface that is more solid than untreated concrete
- Resists dust, oil, greases and other surface contaminants, such as tire marks
- Chemically reacts with salts in the concrete, permanently eliminating the release of concrete dust through the surface pores.
- Hardens and strengthens within the concrete mass by filling voids and pores in the concrete
- Low maintenance

### System Installation Overview:

1. Apply densifier using a low-pressure, high volume pump.
2. Keep floor wet with densifier for about 30 minutes.
3. Work densifier into the concrete with a soft-bristled broom.
4. Lightly mist the surface with water.
5. As floor becomes slippery, thoroughly flush the entire surface with water.
6. Squeegee floor until it is completely dry.
